6. DFD(Data Flow Diagram)

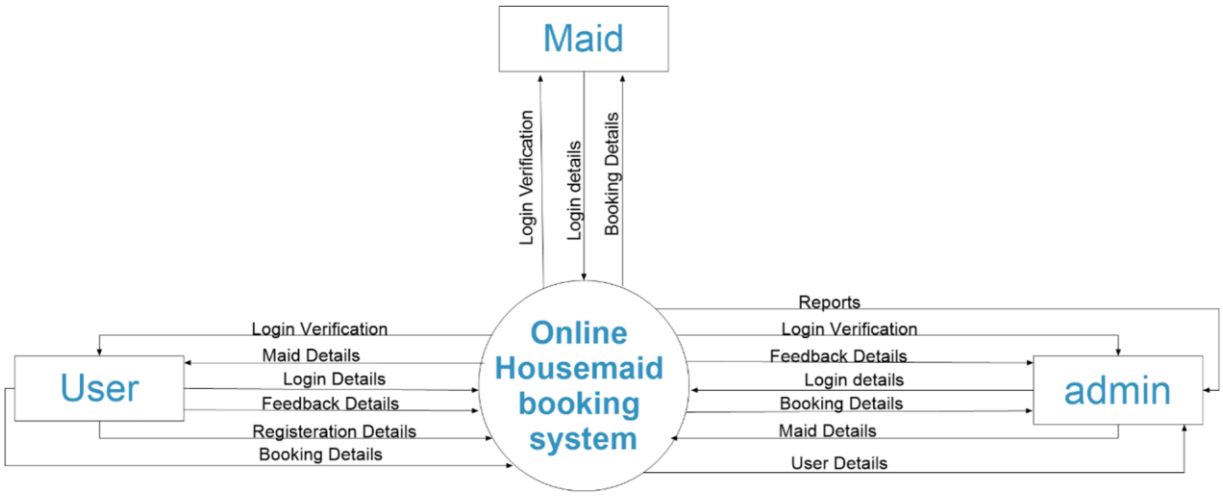

Definition

Data flow is a network diagram illustrating a computerized system, manual or a combination of both, and representation in the form of a set of structured system components that are interconnected in accordance with the rules play. Advantages of DFD is possible to describe the system from the highest level and then them into a lower level (decomposition), whereas the lack of the DFD does not indicate the process is looping, decision-making process and the process of calculation.

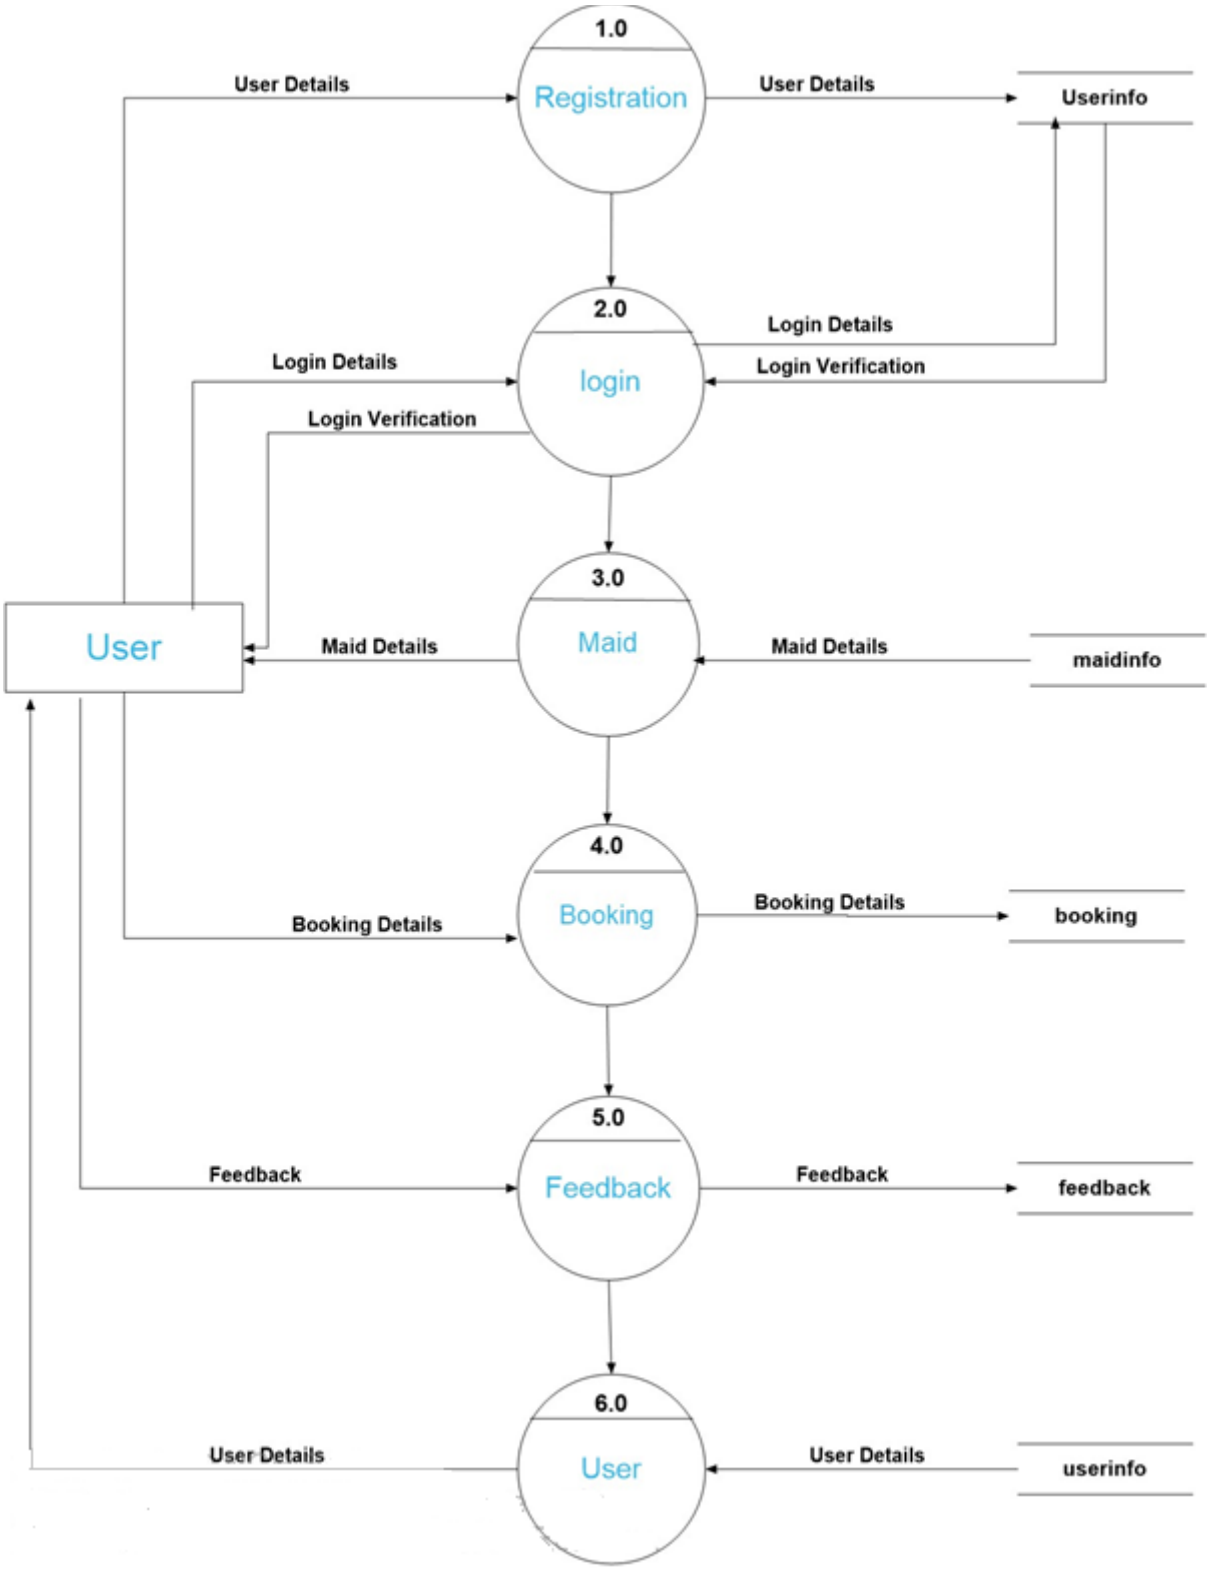

Data Flow Diagram Symbols

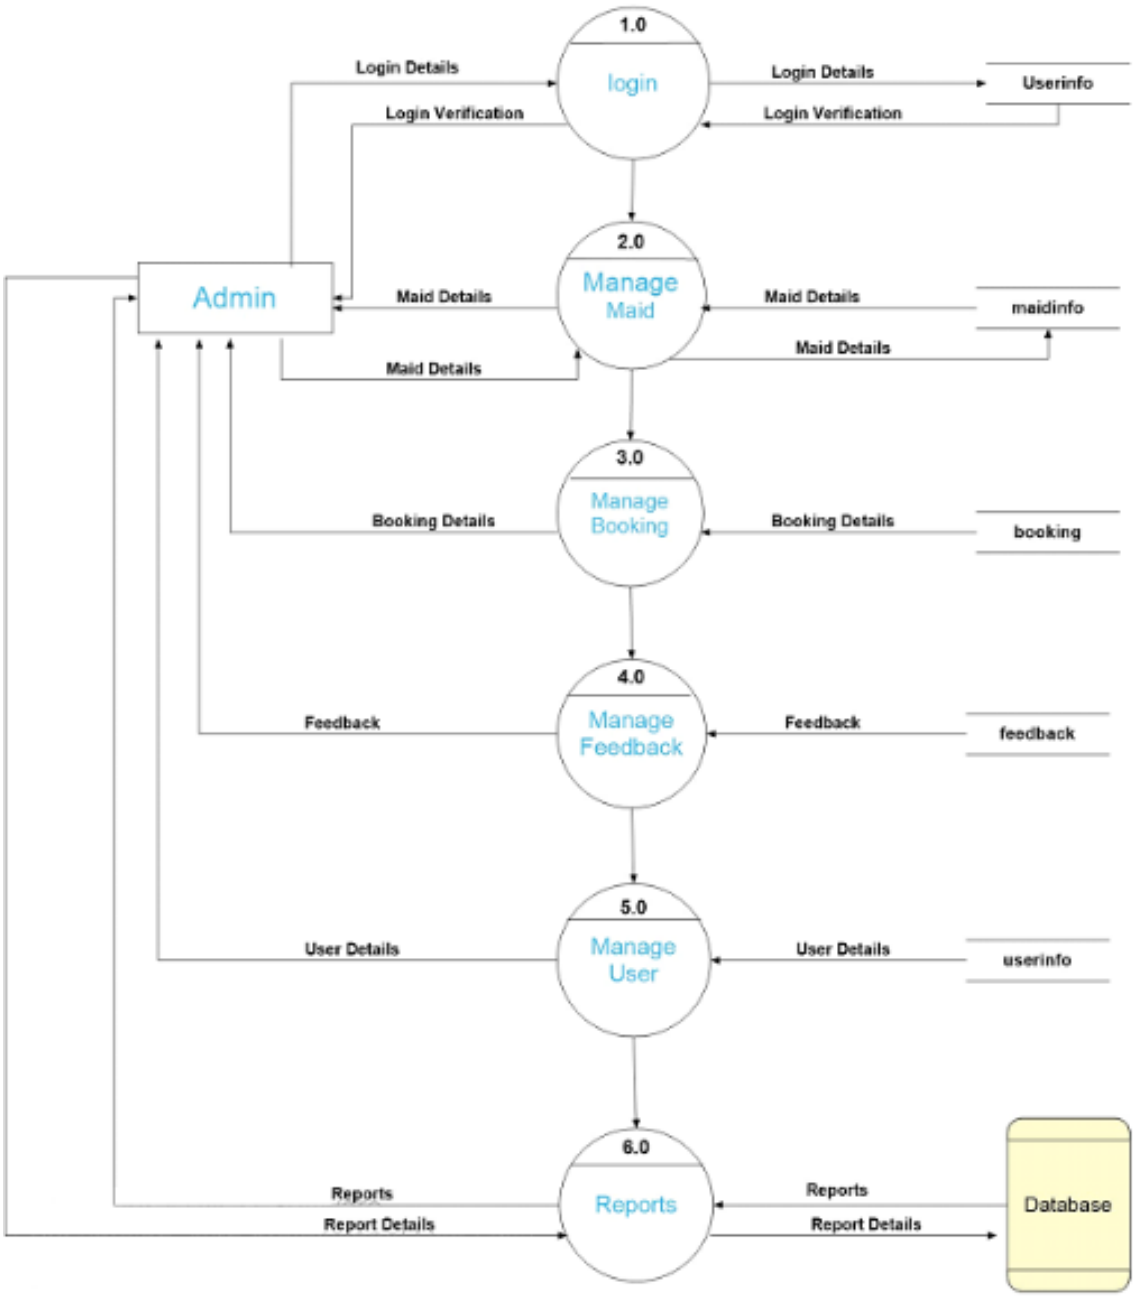

Context Level DFD

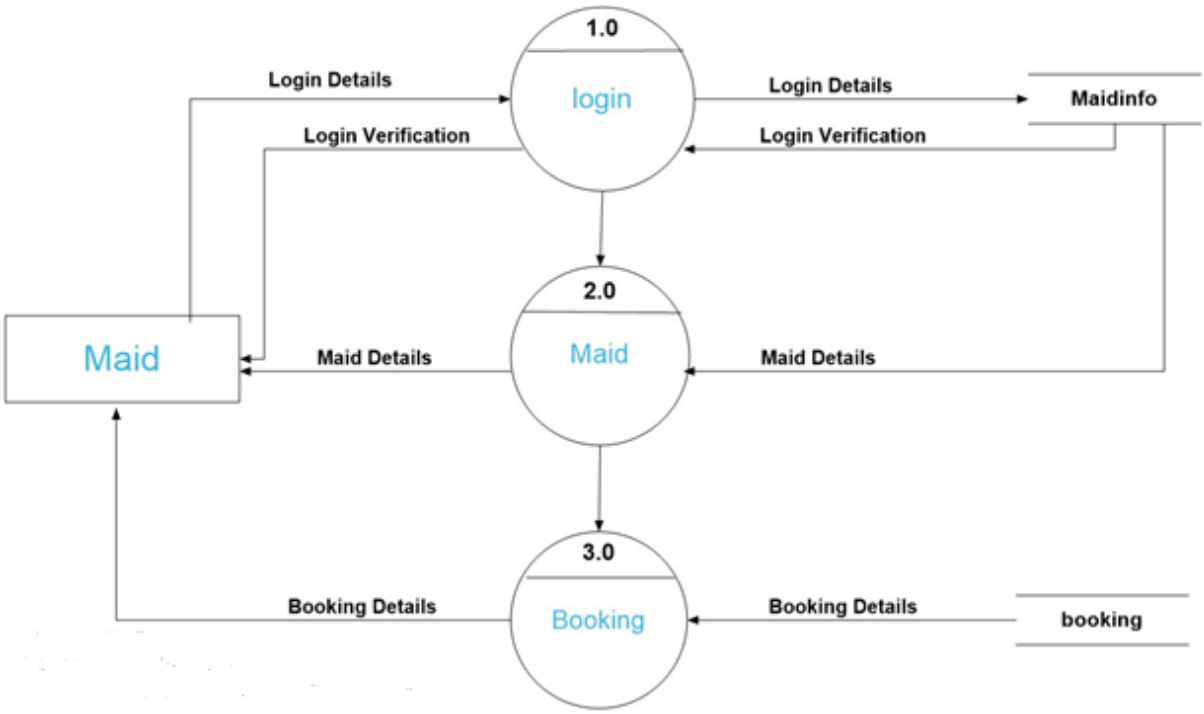

1ST LEVEL DFD FOR USER

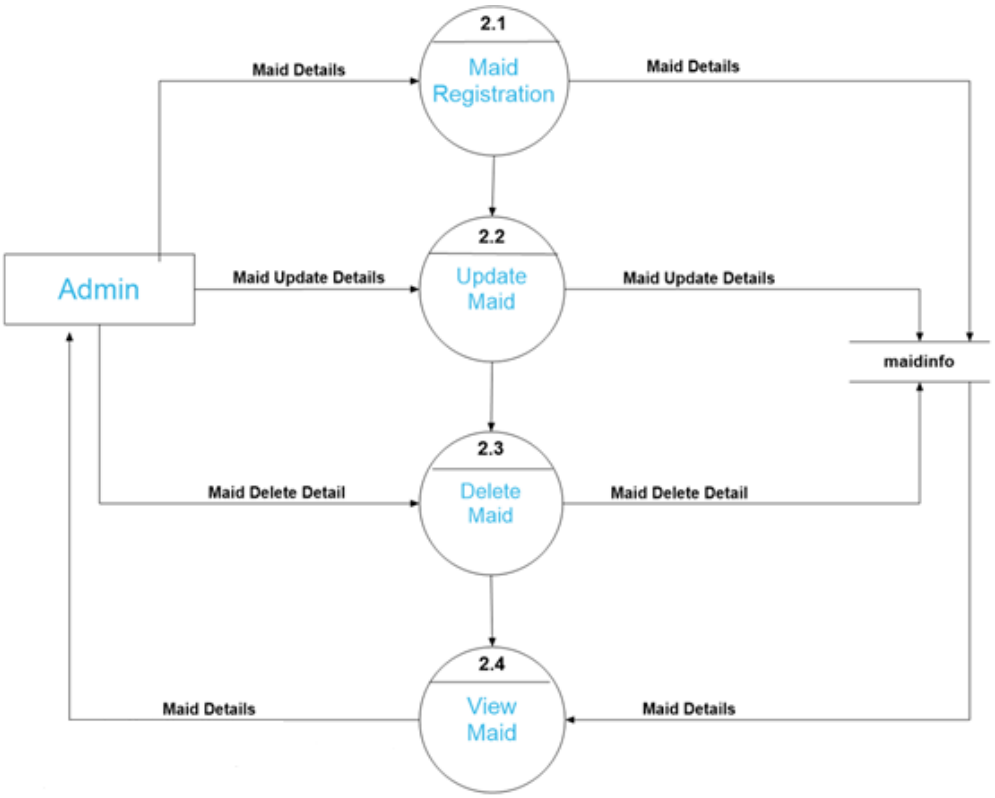

1ST LEVEL DFD FOR ADMIN

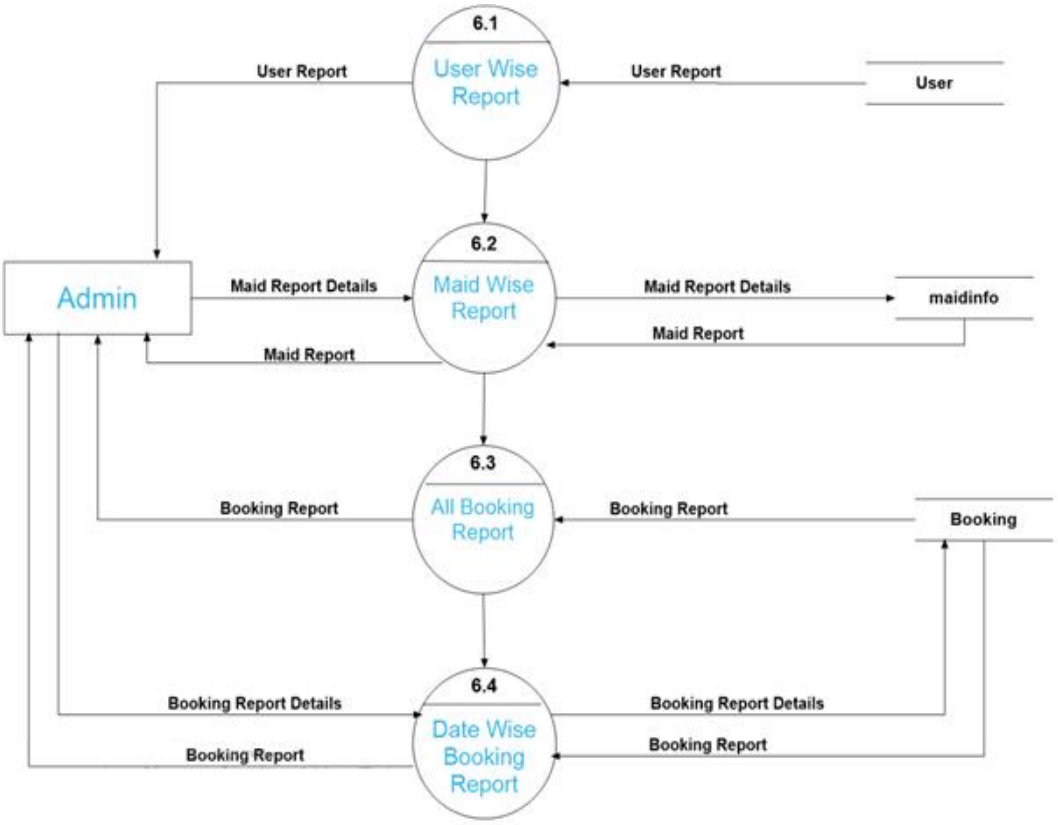

1ST LEVEL DFD FOR MAID

2nd LEVEL DFD FOR MANAGEMAID 2.0 OF ADMIN

2nd LEVEL DFD FOR REPORT 6.0 OF ADMIN

7. System Module

There are three modules:

1)Admin
2)User
3)Maid

Functionalities

Admin Module

- login.
- view users , remove them and update them.
